### **Reasons for Allowance**

The subject matter of the independent claims could either not be found or was not suggested in the prior art of record. The subject matter not found was an irrigation system that has an irrigation line, an irrigation reservoir, an accumulator and some means to control the flow rate or fluid pressure of the fluid passing through said irrigation line. The accumulator is a pressurized reservoir that provides a secondary source of fluid to the irrigation line. Fluid that passes from the irrigation reservoir through the irrigation line to the hand piece doesn't have to pass through the accumulator (as can be seen in figure 1). The accumulator has a separate fluid line into the irrigation line and is not in fluid communication with the irrigation reservoir. The accumulator is directly connected to the irrigation line, so that when the fluid pressure or the flow rate decreases because of an occlusion the accumulator can release fluid into the irrigation fluid to maintain the fluid pressure and flow rate.

The independent claims also include other patentable subject matter in combination with the other elements or steps of the claim not mention in the above paragraph.
